The International consortium for macaque cDNA sequencing and analysis consists of:Department of Virology and Human Genome Center, Institute of Medical Science, The University of Tokyo, Japan; Division of Genetic Resources, National Institute of Infectious Diseases of Japan, Tokyo, Japan; National Health Research Institute, Taipei, Taiwan; Institute of Molecular Biology, Academia Sinica, Taipei, Taiwan; Department of Ecology & Evolution,
                                                                                                                                                                                                                                                                                                                                                                                                                                Description: 1st strand cDNA was primed with an oligo(dT) primer [ATGTGGCCTTTTTTTTTTTT]; double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with Sfil and size selection was performed to exclude fragments <1.5kb.The Sfil-digested PCR product was cloned into distinct DraIII sites of pME185-FL3. XhOI sites just outside the DraIII sites can be used to isolate the cDNA insert. Libraries were constructed by oligo-capping method. Libraries were made from:

QCCB: cerebellum cortex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Osada, N., Hirata, M., Tanuma, R., Kusuda, J., Hida, M., Suzuki, Y., Sugano, S., Gojobori, T., Shen, C.-K.J., Wu, C.I. and Hashimoto, K. The DNA, and its products, are useful in therapy (esp. gene therapy) and diagnosis of human diseases that involve deregulated chromatin-regulator genes having a SET domain, esp. cancer. ```

The present invention describes a method (M1) for screening for an antiCC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

The method comprises determining amplification of specific genes, cc given in the specification, in the genome of a mammal. The invention cc further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in cc a mammalian cell; identifying an agent having therapeutic activity in a chuman patient; identifying an anti-neoplastic agent; determining the cancerous status of a cell; identifying a compound as an anti-neoplastic carerous status of a cell; identifying a compound as an anti-neoplastic capent; treating cancer; monitoring the progress of cancer therapy in a patient; determining the likelihood of success of cancer therapy in a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment on the patient. The methods and compositions of the invention have cytostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a conference method of the invention have cytostatic activity and may be used in a mammal. This polynucleotide sequence represents a conference over-expressed in a cancerous cell, used in the novel cancer.

```
The invention relates to a novel method for diagnosing cancer in a cammmal. The method comprises determining amplification of specific genes, cc given in the specification, in the genome of a mammal. The invention cc further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in cc a mammal an cell; identifying an agent having therapeutic activity in a cc mammal patient; identifying an agent having therapeutic activity in a cc gent; treating cancer; monitoring the progress of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc patient; determining the likelihood of success of cancer therapy in a cc a compound; and determining the progress of a treatment for cancer in a patient.

CC a patient following commencement of a cancer treatment on the patient.

CC and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polymucleotide sequence represents a cc gene over-expressed in a cancerous cell, used in the novel cancer concertion in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; SEQ ID NO 88; 92pp; English

                                                                                                          Diagnosing cancer in a mammal comprises determining amplification of specific genes, e.g., serine/threonine kinase 6, in the genome of a
```

The invention relates to a novel method for diagnosing cancer in a CC mammal. The method comprises determining amplification of specific genes, CC given in the specification, in the genome of a mammal. The invention CC further comprises methods for: diagnosing cancer or a pre-cancerous CC condition in a mammal, inhibiting cancer or a pre-cancerous condition in a mammal interitying an agent having thereputic activity in a CC human patient; identifying an anti-neoplastic agent; determining the CC cancerous status of a cell; identifying a compound as an anti-neoplastic cagent; treating cancer; monitoring the progress of cancer therapy in a CC patient; determining the likelihood of success of cancer therapy in a CC patient; producing test data with respect to the anti-neoplastic activity of a compound; and determining the progress of a treatment for cancer in CC a patient following commencement of a cancer treatment to the patient. CC The methods and compositions of the invention have cytostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a CC gene over-expressed in a cancerous cell, used in the novel cancer used to the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1860
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1889
```

```
The invention relates to a novel method for diagnosing cancer in a CC mammal. The method comprises determining amplification of specific genes, CC given in the specification, in the genome of a mammal. The invention CC further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal, inhibiting cancer or a pre-cancerous condition in a mammal, inhibiting cancer or a pre-cancerous condition in CC a mammalian cell; identifying an agent having therapeutic activity in a CC human patient; identifying an anti-neoplastic agent; determining the CC cancerous status of a cell; identifying a compound as an anti-neoplastic CC agent; treating cancer; monitoring the progress of cancer therapy in a CC patient; determining the likelihood of success of cancer therapy in a CC patient; producing test data with respect to the anti-neoplastic activity of a compound; and determining the progress of a treatment for cancer in CC a patient following commencement of a cancer treatment for cancer in a patient following commencement of a cancer treatment on the patient. CC The methods and compositions of the invention have cytostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a CC gene over-expressed in a cancerous cell, used in the novel cancer of the invention.
